## **DETAILED ACTION**

### ***Claim Objections***

1. Claims 5-8 and 16 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim does not contain all the limitations of the alternative claims to which it refers. See MPEP § 608.01(n). Accordingly, the claims 5-8 and 16 have not been further treated on the merits.
2. Claim 18 is objected to because of the following informalities:  
  
In claim 18, lines 8 and 11, "the first step" and "the second step" should be – a first step – and – a second step --; and line 13, "cause4" should be – cause --.  
  
Appropriate correction is required.

### ***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:  
  
The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
4. Claims 11-17 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.  
  
Claims 11-17 are indefinite because the method claims do not include the steps to perform the method.  
  
In claim 13, "the first step" and "the second step" lack antecedent basis.

***Claim Rejections - 35 USC § 102***

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 11 and 12 rejected under 35 U.S.C. 102(b) as being anticipated by Kuckens (4,393,982). Kuckens discloses, in figs. 2 and 4, a dosing equipment comprising a flexible bellows 19, an actuator being formed of magnet (movable armature disc 26) and a current coil 31 (stationary), the dosing being carried out by changing the magnitude of the electric current passing through the coil (switching on and off), so that the resulting shifting of the magnet and the coil relative to each other generates the dosing movement of the bellows. Note that, the armature disc can be considered as a magnet when the electro-magnetic current coil acts on it.

***Allowable Subject Matter***

7. Claims 1-4, 9, 10 and 18-21 are allowed.
